Stop a wrap early

An empty `wrap-clear` div after a paragraph ends the wrap there:

```
![Mean ratings by condition.](ratings.png){#fig-ratings .wrap-right width="35%"}

Only this paragraph sits beside the figure.

::: {.wrap-clear}
:::

This paragraph starts below the figure.
```

Result

Only this paragraph sits beside Figure 1. The `wrap-clear` div comes right after it.

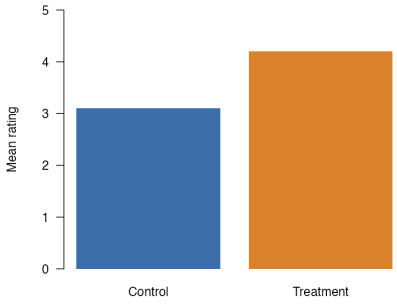

Figure 1: Mean ratings by condition.

This paragraph comes after the `wrap-clear` div, so it starts below the figure and runs the full width of the text. Without the div, it would sit beside the figure too.

Use the div to keep text that belongs to the next topic away from the figure.
